

## CLAIMS

What is claimed is:

1. A headliner ventilation system for a vehicle, comprising:  
  
a first air duct,  
  
a second air duct integrally formed and in fluid communication with said first air duct by use of a flexible hinge portion for selectively positioning said headliner ventilation system between a compact state and an extended state.
2. A headliner ventilation system as claimed in claim 1, wherein said first air duct is a headliner air duct and said second air duct is a pillar air duct.
3. A headliner ventilation system as claimed in claim 1, wherein said flexible hinge portion includes a plurality of accordion-like corrugations.
